

Model 7500 Pit Unscrambler

Smooth, efficient operation.

The 7500 fully automated Pit Unscrambler is one of the most efficient systems available today. Designed and built for rugged reliability and performance, the 7500 accepts raw materials on a 3-strand infeed deck, then conveys it to the pit. There, the automatic system continuously delivers the sorted material to the powered infeed roll system. The 7500 features two 3 HP electric gear drive motors, heavy-duty steel construction and can handle randomly sized cants.

Specifications

- Material Capacity: 6' - 18' Lengths
- Infeed Deck: 12' (3) Strand Green Chain
- Forward/ Reverse
- Upset Sprocket on ea. Strand
- Handles (1) 4' Bunk Before Upset Sprocket
