SPEED UP SHED PRODUCTION

Speed up your shed production with Pendu production line equipment! Drag chains easily move the shed frames down the line. Scissors lifts can be installed to slide in and out of the line as needed or can be stationary on the sides of the line. The lifts give workers easy access to the top parts of the shed that can't be reached from the ground. Plywood lifters raise plywood to where it is easily accessible to workers on the roof of the shed.

Visit our website for more info or call to talk about how our shed production line equipment can help you!
